

# EntriWorX Planner

Efficient specifications planning of door and access solutions

## Digitalized door planning

### Web-based planning platform

Central platform for all data relating to the door—the CDE (Common Data Environment) for door planning.

### Easy collaboration

Efficient and direct communication and collaboration between all project participants via standard interfaces such as BCF (Building Collaboration Format).

### Predefined templates

Direct access to standard door templates and the dormakaba product catalog.

### Comprehensive information

Detailed development of door solutions with component list, connection diagrams and visualizations.

**Planning door and access solutions is a challenging task that requires a great deal of knowledge and experience.**

The EntriWorX Planner was developed for the efficient planning of door solutions – a software, a service specially provided for you. The tool can be used by yourself, security consultants, planners, or by our dormakaba experts, who are our specialists for your support and your planning.

This new specification software, the EntriWorX Planner, provides all the relevant data and improves the exchange between all relevant interfaces.

The technical and operational details of the design plans can be confirmed online and adapted if necessary, for instance, by security advisers, installers or by dormakaba itself. This simplifies the execution planning for everyone.

The EntriWorX Planner also enables implementation that complies with standards and building regulations as well as offering functional and predefined door templates for easy planning.

In addition, the tool provides an overview of specifications during the building phase and also allows for flexible adaptations to the door solutions planned by the architects.

The door solution is integrated into the database of the EntriWorX Planner and is available for future projects after testing. This means you can benefit from door models that have already been planned and increase your productivity.

### dormakaba support

Our experts will support you with their comprehensive specification service for creating your door solutions or with support for planning access solutions in your planned building.

# Direct cooperation and clear communication

## EntriWorX Planner – our tool for security consultants and planners

### EntriWorX Planner

For execution planning

#### Clear visualization

- Clear and comprehensible presentation of the planning.
- Completeness of planning data, all documents at a glance, circuit diagrams, installation handbooks and set-up videos are available.
- Visualization of details, access and security zones.
- Graphical representation of the door solutions on your floor plans.

#### Control

- For each piece of hardware, the coordinating instance for delivery, installation and commissioning is specified.

#### Planning documents

- Exact specification of all door solutions including components.
- Additional special elements for planning access controls can be configured.
- A wide range of output documents can be generated (tender documents, materials lists, project brochures, door data sheets, connection configurations, etc.)

#### Clear overview

- For each equipment component of the door, the system can show who is responsible for delivery, installation and commissioning.

## Improving the execution planning

The EntriWorX Planner is our digital tool for security advisors and planners and supports you with your execution planning for proposals.

We support your planning with functional door models from predefined door templates. The implementation is compliant with standards and building regulations.

The tool can be used by security consultants and planners as well as by dormakaba itself.

Talk to our experts today if you have any questions.
