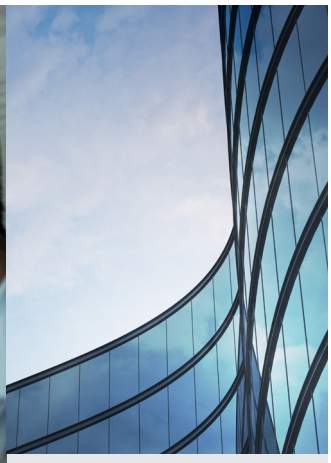
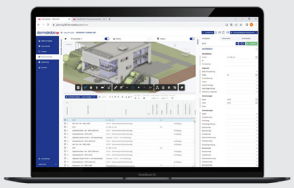
EntriWorX Planning 360°

Efficiency through collaborative planning





Digitalized door planning

Web-based planning platform
Central platform for all data relating to the door – the CDE (Common Data Environment) for door planning.

Easy collaboration
Efficient and direct communication and collaboration between all project participants via standard interfaces such as BCF (Building Collaboration Format).

Predefined templates
Direct access to standard door templates and the dormakaba product catalog. Planning 360° optimizes the BIM process, working with BIM models in different formats.

Full overview
The database offers structures and processes to let you keep all data under control, even in complex projects.

The new platform for efficient door schedule management during the planning process

Whether for fire protection, escape route control or accessibility, planning multifunctional access systems today demands effective management of different data from a range of sources.

Collaboration and data flow across all trades and partners is a major challenge in the (BIM) planning process.

The new planning platform EntriWorX Planning 360° fully supports your door schedule management.

This new service enables easier planning, management and merging of the different trades involved with your doors by both architects and planners.

Increases efficiency of door schedule management

Planning: Efficient planning involves delivering the right data at the right time. Reliably, securely and flexibly.

Control: Our database offers structures and processes to let you keep all data under control, even in complex projects.

Communication: Designing and constructing modern buildings is a complex task. EntriWorX Planning 360° helps by providing direct communication with our access experts.

Transparency: The web-based tool lets you track all changes to the door schedule in detail.

Individual standards: Every project is different. That's why EntriWorX Planning 360° adapts to your standards and is able to handle different data structures.

Greater productivity with EntriWorX Planning 360°

Our easy & efficient planning tool for architects

EntriWorX Planning 360°

For the design planning process

Simple project generation

- Upload of BIM models and Excel files
- Work with Autodesk Revit and IFC files, 2D CAD formats as well as different document and image formats
- Issue management based on BCF (Building Collaboration Format)
- Project wizard with templates for Revit and IFC

Clear visualization

- Clear illustration of complex situations and interdependencies in 3D
- Highlighting components according to different filter criteria.
- Adaptation of the screen view and the data views

Individual data management

- Easy import and export of door schedules with one click
- Individual data views depending on phase and trade
- Version management restores all versions
- Generation of reports in different formats

Product information

- Direct access to product information and data sheets from the project
- Access to preconfigured door templates and the dormakaba product catalog

Improving design planning

Solutions for issues like fire safety, accessibility and the right access control system must be defined at an early stage of the building design.

EntriWorX Planning 360°, the web-based collaboration software, simplifies not only the design planning but also communication among all those involved in the planning and implementation of generating the door list.
