

Access with Smartphone

Mobile Access by dormakaba

Quick, flexible, secure

Mobile access makes it possible

If you value smart access solutions, you'll be on the safe side with Mobile Access. Whether for personal or business applications, real estate, small, medium or large companies – by electronically transmitting their access rights to your users' smartphones, you gain time, freedom and flexibility.

Quick

No need for personal key handovers – your users receive the digital key immediately on their smartphone and open the door via the app.

Secure

The transmission is end-to-end encrypted. In addition, the access data itself is encrypted, so the smartphone cannot access it.

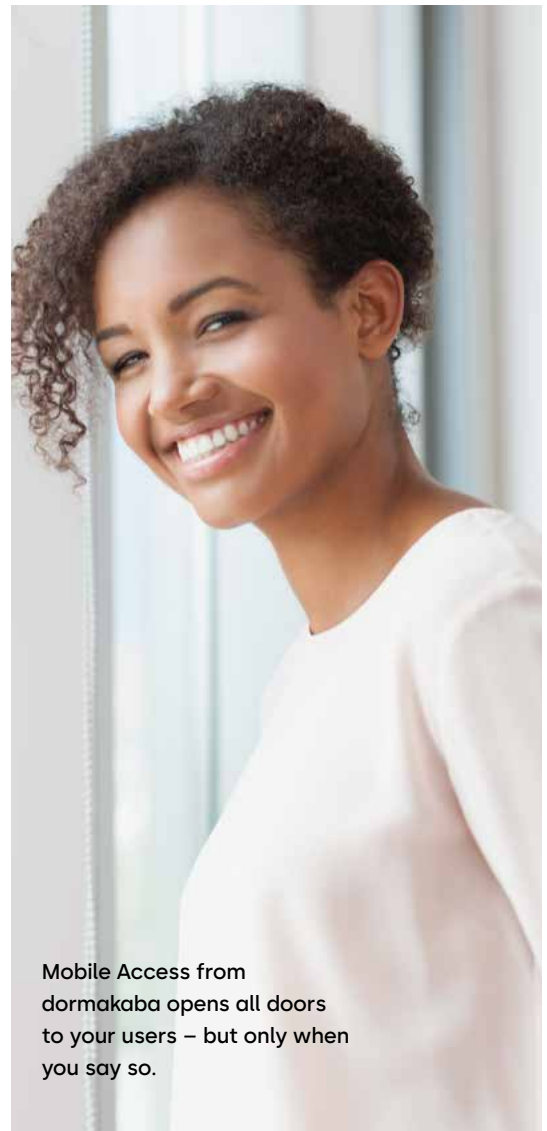

Flexible

Send digital keys over the mobile network and flexibly adjust who has access where, and for how long.

Time-saving & cost-effective

Smart digital processes can save you time and money and enable you to develop new business models.

Mobile Access from dormakaba opens all doors to your users – but only when you say so.

Open to new possibilities With Mobile Access

Mobile Access simplifies your access management: send digital keys to users with just a few clicks. Your users download the dormakaba mobile access app and open electronic door locks conveniently with their smartphones.

**At work or at home?
The main thing: it's smart!**

With Mobile Access, employees can use their smartphone to access their office. Or they can open their own front door at home. New access rights can be granted remotely to employees,

external contractors, guests, family members and friends – without having to worry about the return or loss of keys and badges.

Access for your employees

With Mobile Access, your employees can use their smartphone to enter their workplace. And you can easily grant access rights across locations.

For instance, a project manager visiting from New York receives all the access rights she needs for her visit on her mobile phone while still en route.

React quickly and flexibly

You can react quickly in the event of unexpected absences due to illness, substitutions, or if someone needs get to the office in a hurry. With Mobile Access, you send digital keys directly to the smartphone of the person who needs access. Mobile access can also be seamlessly combined with time recording, thanks to the interface to partner applications.

Sending access rights in advance

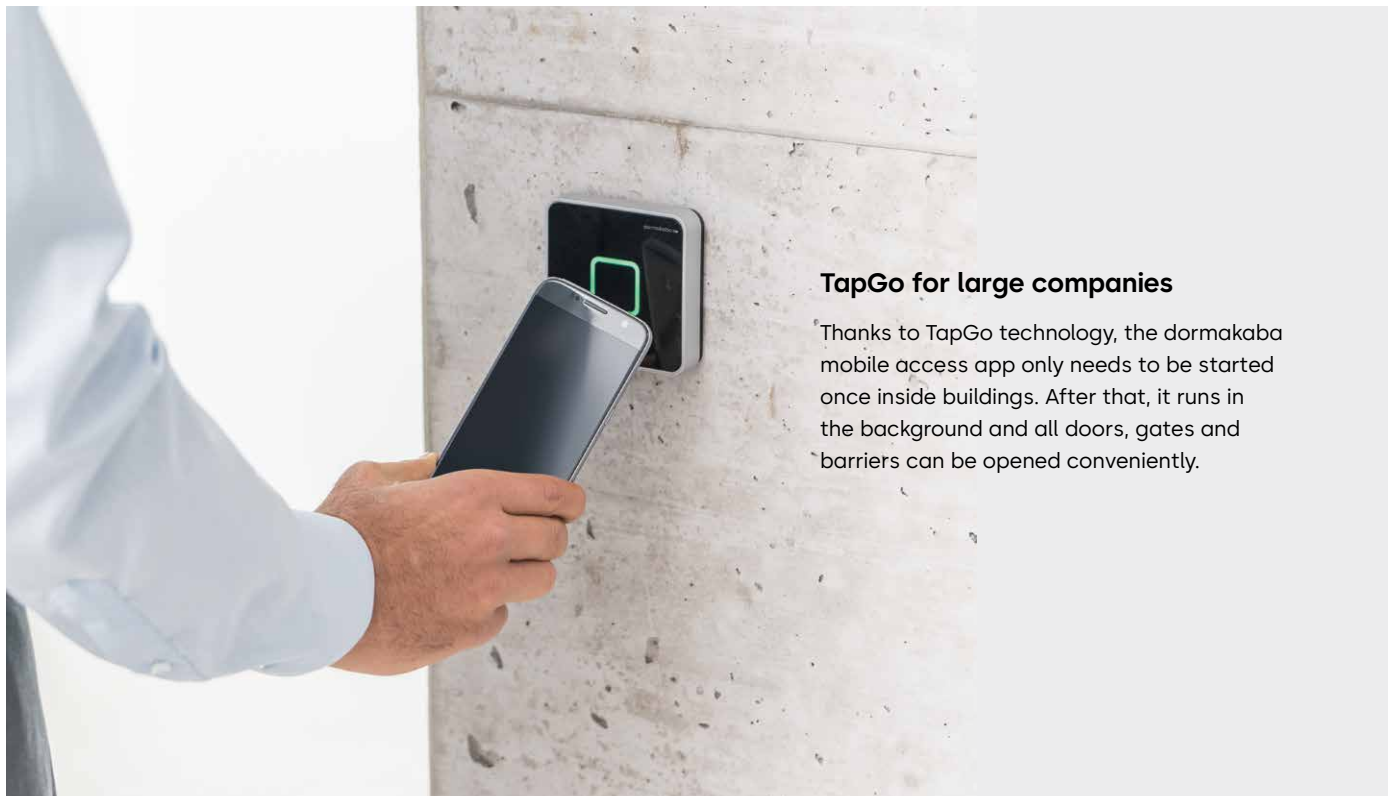

You are expecting visitors after business hours? Or a contractor needs to work during the night? Then you are able to send them their temporary access rights in advance – across several locations, and easily adjustable. Your electronic door locks are smartly integrated into your access solution and the information you need is right at your fingertips.

Simplify operations, increase efficiency

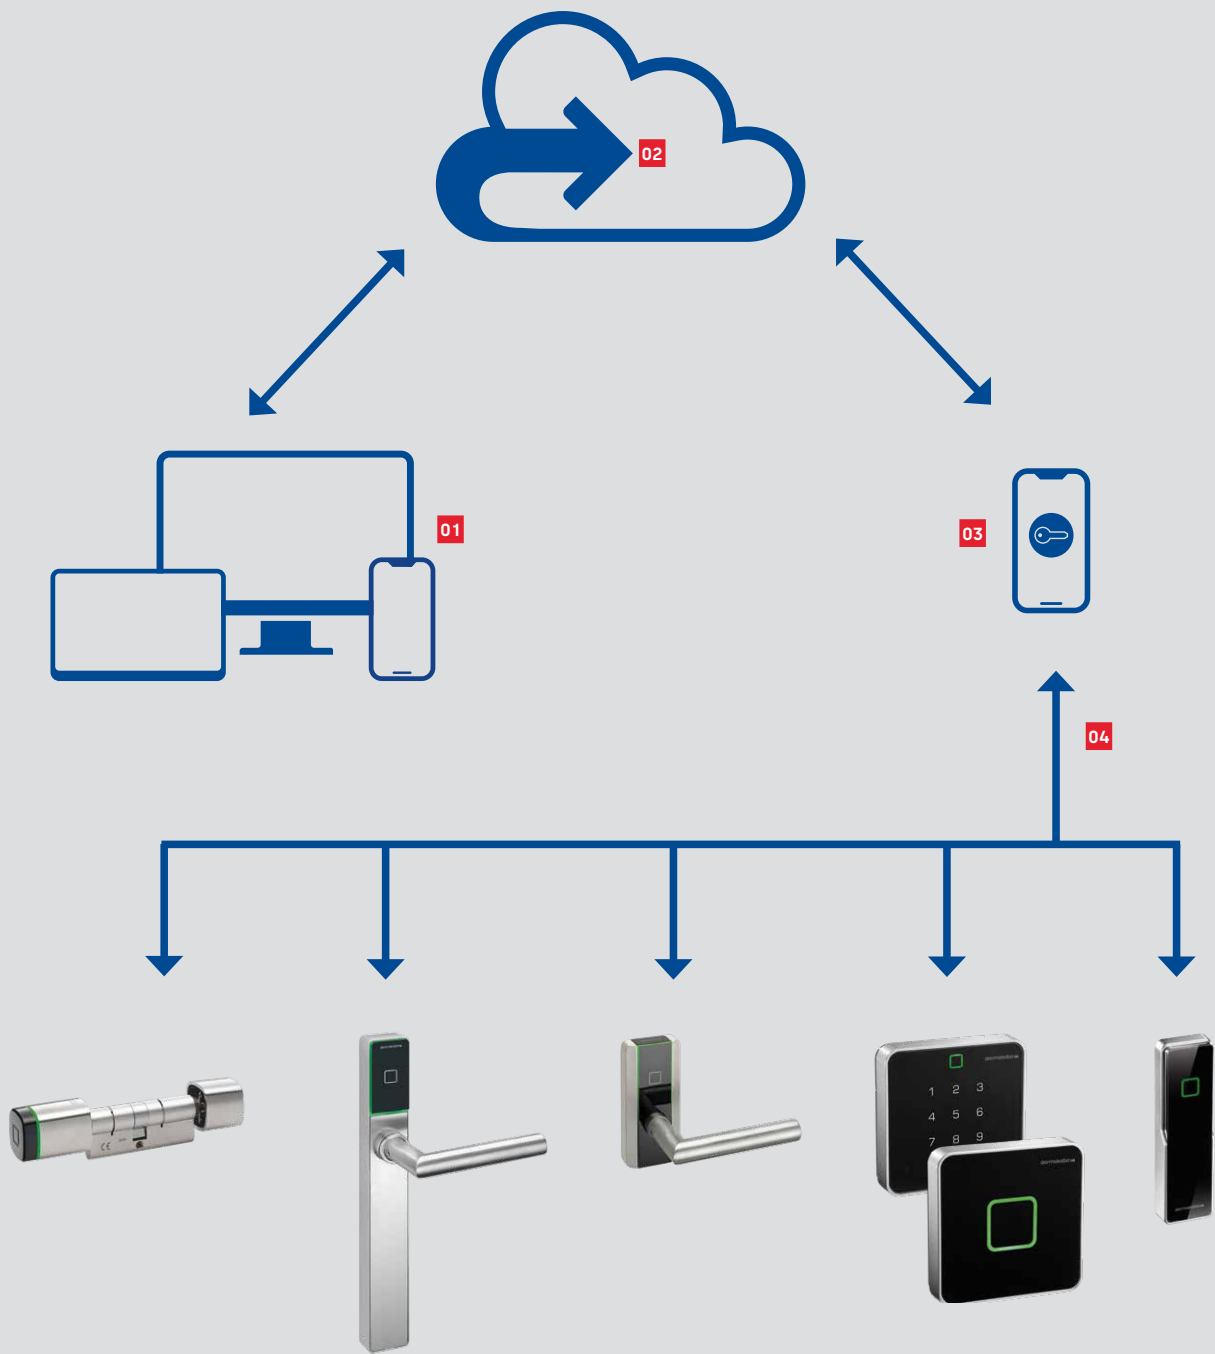

Mobile Access makes life easier. Choose our cloud-based solution and you will be able to integrate your own booking system: rent out apartments, sports fields, spaces or rooms – without having to be on site when the booking time starts.

Property managers are often busy dealing with tenant changes, lost keys or external service providers. Mobile Access allows them to work more efficiently, as they no longer need to be on site to open doors and hand over keys.

TapGo for large companies

Thanks to TapGo technology, the dormakaba mobile access app only needs to be started once inside buildings. After that, it runs in the background and all doors, gates and barriers can be opened conveniently.

01
Access solution

- Grant or revoke access rights, define time profiles, and much more

02
